

DevOps Engineer

ABOUT US

We are a creative technology company dedicated to building relevant digital products. As a partner to mostly Dutch clients, we help businesses update and improve existing products in response to new opportunities and ever-evolving market needs. Our headquarters are based in Amsterdam, Netherlands with business development, sales and collaborative client support experts who help clients define the development requirements and business-oriented functional tests. Our technology and software development centre is located in Split, Croatia with dedicated agile teams managing the development for our clients.

Our teams deliver software solutions with the best in class methods in agile development. The development team is composed of a number of agile teams with an ever-expanding portfolio of skills. We believe in DevOps principles, infrastructure and test automation and continuous delivery. Our autonomous self-organizing agile teams deliver products reliably with high quality and in time. We combine disciplined front and back end software development practices with the right amount of architectural planning.

THE ROLE

The DevOps Engineer role at our company is very important and crucial to the smooth running of the business, software development and operations and you will be expected to be an integral part of these divisions. You will be supporting and continuously improving infrastructure and application standards, as well as security design and implementation. You will play a key part in operations automation as well as environment and applications/solutions provisioning, deployment and testing.

We run production and internal systems in cloud as well as hybrid environments. If you can challenge existing infrastructure and development practices, promote excellence and continuously improve deployment and security standards, then this is for you!

DUTIES & RESPONSIBILITIES

- Act as primary liaison between business, development, infrastructure and operations.
- Maintain a thorough understanding of business requirements and operations.
- Ensure that in-house solutions are appropriately documented and maintenance and application support considerations catered for.
- Develop, maintain, and promote enterprise IT standards.
- Maintain consistency across the organization's systems by ensuring that development and infrastructure teams follow enterprise IT standards.
- Maintain an up-to-date skill set with regards to technologies used in our systems in particular and IT industry in general.
- Keep abreast of industry best practices.
- Be an exceptional communicator and team player.

EXPERIENCE & SKILLS

- Passion for operations
- Experience with large scale deployments
(high availability, scalability, resilience, API security)
- Excellence in AWS platform (AWS CLI and API)
- Experience with datacentre infrastructure
(networking, firewall config, security)
- Solid experience with CI and/or CD (GitHub, TeamCity)
- Excellent knowledge of TCP/IP fundamentals and network design
- Experience with Windows (and Linux) administration
- Experience of working in an Agile development environment

CORE TECHNOLOGIES

- AWS CLI and API
- Scripting (Bash, PowerShell)
- Windows
- Linux

OTHER TECHNOLOGIES TO BE FAMILIAR WITH

Infrastructure:

- Networking & resource provisioning (VPC, CloudFormation)
- Deployment (EC2, AutoScaling, SQS, CodeDeploy, Route53)
- Desired containerisation (Docker)
- Storage & search (RDS, S3, ElasticSearch, ElastiCache)
- Security (IAM, CloudTrail, CloudWatch, SNS)

Databases:

- Oracle, MS SQL, MySQL (RDS), DynamoDB

Systems monitoring:

- CloudWatch, DataDog
- PaperTrail, Splunk

CDN, Site Acceleration, Cloud Security:

- Akamai, CloudFront, CloudFlare
